

Saniya Arora

AI-Native Product Designer | Complex Workflows, AI Interface Patterns & Rapid Prototyping

New York, NY • [Portfolio](#) • [LinkedIn](#) • saniyaaroraux@gmail.com

AI-native product designer who turns complex, high-stakes workflows into clear, high-quality interfaces. I work end-to-end, from ambiguous problem to shipped product, and I design new patterns for how people work alongside AI, shaping prompts, decision flows, and trust signals. I use AI reflexively (Figma MCP, Claude Code, Cursor) to prototype faster and ship sooner, with a bias toward getting real product into people's hands.

EXPERIENCE

Capital One – Identity Platforms & AI Workflows

Senior Product Designer | 2023–Present | New York, NY

- Owned end-to-end design for Locksmith, a 0→1 identity platform, turning a complex, high-stakes workflow into a clear interface that cut operator onboarding from 77 days to under 1 day
- Designed new interaction patterns for working with AI, shaping prompts, decision flows, and trust signals across AI-powered enterprise tools
- Prototyped and shipped hands-on with Figma, Figma MCP, Claude Code, and HTML, leveraging AI to move from first sketch to production faster
- Helped shape WAVE, an internal multi-agent AI system exploring how agent frameworks accelerate design, prototyping, and engineering handoff
- Drove clarity and consistency by scaling reusable interaction patterns across enterprise tooling

John Deere – Manufacturing & Emerging Tech

UX Designer | 2022–2023 | Moline, IL

- Designed data-dense dashboards and telemetry interfaces, turning complex operational workflows into clear, usable tools for global engineering teams
- Contributed to design system architecture, improving consistency and quality across internal tools
- Prototyped digital-twin workflows to visualize machine performance and system health

Carbon Health – Med-Tech

UX Design & Research Intern | 2022–2023 | San Francisco, CA

- Designed and prototyped EHR integration workflows, improving usability and care coordination
- Conducted user research and usability testing across patient-provider workflows
- Research insights drove a 33% improvement in workflow efficiency

EDUCATION

- M.S. Human–Computer Interaction & Design – University of California, Irvine (2023–2024)
- B.S. Psychology, Minor in Interaction Design – San José State University (2018–2022)
- UC Berkeley Product Design Bootcamp (2020–2021)

AI & PROTOTYPING PROJECTS

- AI Design-to-Deploy Pipeline: Using Figma MCP, Claude Code, and Cursor to turn structured prompts into deployable UI, compressing the path from sketch to shipped
- Founder Collaboration: Partner with early-stage startups to prototype MVPs and ship real product surfaces end-to-end, from first sketch to production

SKILLS & TOOLS

- Design: Interaction Design, Visual & UI Design, Product Thinking, User Flows, Design Systems, End-to-End Ownership, Rapid Prototyping
- AI: AI-Native Design, AI Interaction Patterns, Prompt Design, Trust & Governance UX, Agent-Based Systems, AI-Assisted Prototyping
- Domain: Enterprise Platforms, Complex Workflows, High-Stakes & Compliance UX, B2B SaaS
- Tools: Figma, Figma MCP, Cursor, Claude Code, HTML/CSS, Adobe Suite
